I drove around a bit and did not see you so we went ahead and met with Mr. Meadows and toured the old plant site. The plant is almost completely stripped and the WWTP is no longer there from what we could see. Mr. Lane was in the plant getting rid of chemicals.

They will see if they can use them and what has to be disposed of.

② York Automotive: Toured plant and spent trichloroethylene building. Everything seemed to be in order at the time.③ Custom Can - to be sure, did you stop by the site?

From what I could see the beams did not sprout and there is still a bare spot there. That is if I was at the correct place - gate with no trespassing on it with a small shack on the west side; .25 miles from County Rte 2 (between Rte 2 and site is a cultivated farm field (beans?)).

Cathy
